## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

**Unofficial**

**FROM:** Lin Hsu  
**TO:** Examiner Kevin Nguyen  
**DATE:** 9 February 2004  
**RE:** Application No. 09/818,081  
Attorney Docket No. PALM-3628

Examiner Nguyen,

Here follows independent Claims 1, 13, and 19 with proposed amendments to overcome the Yokota prior art references. In particular, emphasis is placed on fixed pixel border that surrounds the passive matrix. The claims are presented for discussion during the Examiner's Interview scheduled for February 9<sup>th</sup> at 3:00 p.m. EST.

1. (Suggested Amendments) A display unit comprising:  
a passive matrix of independently controllable pixels comprising n rows and m columns of discrete pixels, said passive matrix operable to generate an image in response to electronic signals driven from row and column drivers coupled to said passive matrix, said image representative of information stored in a frame buffer memory; and

Examiner: Nguyen, K.

Serial No.: 09/818,081  
Group Art Unit: 2674

a fixed pixel border having a predetermined width, said pixel border surrounding said passive matrix and comprising a plurality of pixels which are uniformly controlled between an on and an off state by a common threshold signal.

13. (Suggested Amendments) A display unit comprising:  
a passive matrix of independently controllable pixels comprising n rows and m columns of discrete pixels, said passive matrix being negative display mode and operable to generate an image in response to electronic signals driven from row and column drivers coupled to said passive matrix, said image representative of information stored in a frame buffer memory;

a fixed pixel border having a predetermined width, said pixel border surrounding said passive matrix and comprising a plurality of pixels which are uniformly controlled between an on and an off state by a common threshold signal; and

a contrast adjustment circuit for adjusting voltage levels supplied to said row and column drivers to adjust the contrast of said image of said passive matrix, wherein said contrast adjustment circuit is also operable to adjust said common threshold signal to match the contrast of said passive matrix.

19. (Suggested Amendments) A portable electronic device comprising:

PALM-3626  
Examiner: Nguyen, K.

Serial No.: 09/818,081  
Group Art. Unit: 2674

a processor coupled to a bus;  
a memory unit coupled to said bus;  
a user input device coupled to said bus; and  
a display unit coupled to said bus and comprising:  
a passive matrix of independently controllable  
pixels comprising n rows and m columns of discrete pixels,  
said passive matrix operable to generate an image in response  
to electronic signals driven from row and column drivers  
coupled to said passive matrix, said image representative of  
information stored in a frame buffer memory; and  
a fixed pixel border having a predetermined width,  
said pixel border surrounding said passive matrix and  
comprising a plurality of pixels which are uniformly  
controlled between an on and an off state by a common  
threshold signal.
